

DiskWarrior has successfully built a new directory for the disk named "Macintosh HD." The new directory cannot replace the original directory because of a disk malfunction.

A disk malfunction is a failure of or damage to any mechanical component of the disk device, or any component connected to it. The malfunction will likely worsen. Therefore, recovering your files from the DiskWarrior Preview as quickly as possible is essential.

It is highly recommended that you backup all of your data from the preview disk.

Notes:

The original directory is damaged and it was necessary to scavenge the directory to find file and folder data.

Some files that had been lost or thrown away may have been recovered.

Optimizing the Catalog Tree Directory File has increased available disk space.

The disk was not on the desktop prior to rebuilding. Only the preview disk will appear if you preview the replacement directory.

Comparison of the original and replacement directories could not be performed because the original directory was too severely damaged. It is recommended that you preview the replacement directory.

- All errors in the directory structure such as tree depth, header node, map nodes, node size, node counts, node links, indexes and more have been repaired.

Disk: "Macintosh HD"
